

Yueh-Po Peng

Experience

AI Engineer

Oct 2024 – Present

Gate.io

Taipei, Taiwan (Remote)

- Developed a fund flows anomaly detection system with LLMs and tree-based models, enhancing financial security.
- Built a Text-to-SQL system to streamline internal data queries, improving query efficiency by 20%.

Research Assistant

Mar 2022 – Oct 2024

Institute of Information Science, Academia Sinica | MCTLAB | Supervisor: Dr. Li Su

Taipei, Taiwan

Research Topics: Self-Supervised Learning, Medical Imaging

- Proposed a Transformer-based self-supervised learning method for decoding brain signals (fMRI), achieving an 77% reduction in memory footprint.
- Conducted distributed training experiments on high-resolution 4D medical images (fMRI) using TWCC HPC.
- Proposed a whole-brain feature selection method for decoding musical pitch from fMRI [2].

AI Engineer Intern

Mar 2023 – Jul 2024

Tomofun - World's leading pet technology company

Taipei, Taiwan

Research Topics: Computer Vision, Large Language Models, Multimodal Learning

- Developed an automatic short music video generation system for daily pet clips.
- Fine-tuned visual language models (e.g., BLIP), achieving a 20.6% improvement in visual question answering.
- Enhanced LLaVA image inference speed by 250% with only a 3% accuracy reduction.
- Developed APIs for visual language models using llama.cpp/ollama for image-caption pair datasets.

Education

National Taiwan University

Feb 2023 – Jun 2024

- M.S. in Data Science
- Thesis topic: Whole-Brain Feature Selection Methods for Decoding from fMRI Data

Taipei, Taiwan

National Taiwan University

Sep 2019 – Jan 2022

- B.S. in Computer Science and Information Engineering (CSIE)

Taipei, Taiwan

Research & Projects

Guitar Effect Removal

Collaboration with Positive Grid ML Team

- Proposed a two-stage method to remove distortion effects from guitar recordings using Positive Grid VST plugins.
- Achieved 20% higher audio quality than the best baseline, rated by 26 professional guitarists.
- Published in DAFx 2024 [1].

Whole Brain fMRI Feature Selection

- Proposed a two-stage method to extract fMRI features and predict musical pitch.
- Demonstrated 2-fold improvement over ROI-based feature selection in fMRI-music analysis.
- Published in ICASSP 2023 [2].

Skills

- Languages/Frameworks:** Python, PyTorch, TensorFlow, Pandas, Scikit-learn, Slurm, Go, HTML, JavaScript, C++, C, Linux.
- Skillset:** Self-Supervised Learning, Medical Imaging, Computer Vision, Music Information Research, Distributed Training.
